

QUALIFIED THIRD-PARTY INSPECTORS FOR STORMWATER MANAGEMENT FACILITIES

The City of South Portland’s Stormwater Performance Standards require annual inspections by qualified third party inspectors for all stormwater management facilities on new development or redevelopment projects >15,000 square feet. The Water Resource Protection Department is responsible for developing and maintaining a list of approved third party inspectors based on the following criteria:

- The inspector must have a college degree in an environmental science or civil engineering, or comparable expertise;
- The inspector must have a practical knowledge of stormwater hydrology and stormwater management techniques, including the maintenance requirements for stormwater management facilities; and
- The inspector must have the ability to determine if stormwater facilities are performing as intended.

Only individuals designated as qualified third party inspectors by the Water Resource Protection Department will be allowed to conduct stormwater management facility inspections in the City of South Portland. As of **7/14/23** the following individuals submitted documentation in support of their qualifications to conduct third party stormwater management facility inspections.
